Beneficiary API Document (Jan 2021)

Contents

Beneficiary Search

Overview

This allows clients to retrieve a list of active beneficiaries on the GoFundraise platform across different regions. You can use the query strings to filter the search results. If no query is provided the results will be ordered according to event rank if available.

This is a public endpoint

Url: https://api.gofundraise.com.au/v1/beneficiaries/search
Method: GET

Paging

This endpoint is paged, with a maximum of 1000 results per page.

pagesize

pageindex

Parameters

query

- Search for beneficiary name

location

- Search for the beneficiary address string

region

- Search for results across regions - US, AU, NZ

eventcampaignid

- Search for beneficiaries associated to specified event campaign id

tags

- Search for beneficiaries that have specified public tags associated with them

Response

This endpoint's response will provide an ordered array based on rank unless using the location of query parameters, of which it will then be ordered by the query weight.

Event Beneficiaries (Deprecated)

Overview

It is not recommended to use this endpoint as it is not paged, ordered, or filtered, and can return a significant amount of data for larger open charity events. This is only to be used on with events with less than 5000 participating beneficiaries, and is in general, provided only for backward compatibility for grandfathered API users.

This endpoint does not return

- Beneficiary Tags, Themes, or External Id's

This endpoint requires Authorization via a Bearer Token

Url: https://api.gofundraise.com.au/v1/events/{EventCampaignId}/beneficiaries
Method: GET

Parameters

EventCampaignId

- Event Campaign ID which corresponds to the event campaign on the GoFundraise platform

API Spec

The API spec document can be found here and will be updated when new functionality is released into production.
